Prenez quelques minutes à lire les recommandations d'usage pour le montage des garnitures de frein pour les freins à tambours.

La plupart de ces recommandations sont applicables pour d'autres freins à tambours.

Nous avons réalisés ces kits de frictions avec le plus grand soin afin de vous assurer la plus grande satisfaction client.

Ces kits peuvent équiper les Porteurs, Tracteurs, Cars & Bus.

Les produits composants ces kits sont issus de producteurs du **premier équipement (OEM)**.

Les garnitures de frein sont conformes au règlement Européen **UNECE R90**.

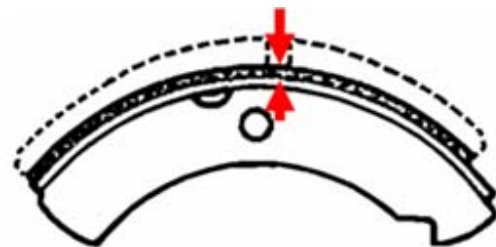

Quand faut il changer ces garnitures ?

L'épaisseur minimum est de **5 mm** ou 1 mm au dessus de la tête de rivet

Changez vos garnitures si elles présentent un glaçage.

Ce phénomène sous-entend un problème de mâchoires ou un problème de commande du frein. Vérifier les mâchoires et les pièces de commande du frein.

Les garnitures ne doivent pas avoir de fissures (notamment sur la tranche).

Toutes usures anormales de la garniture, vous imposent de vérifier les mâchoires et ensuite les pièces de commande du frein.

Comment réaliser un rivetage adéquat ?

Vous devez utiliser un rivet adéquat au type de garniture.

La pression de rivetage doit être à environ 800 KgF.

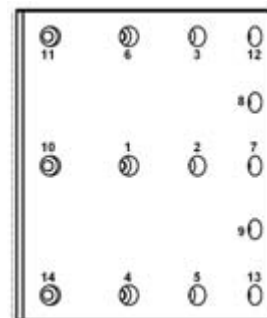

Vous pouvez précontraindre les garnitures avant rivetage.

Veuillez commencer votre rivetage toujours du centre vers l'extérieur.

L'écart maximum entre la garniture et la mâchoire ne doit pas dépasser **0,15 mm**.

Un écart de 0,20 mm est autorisé sur les extrémités extérieures.

Prendre soin de vérifier la qualité du rivetage.

Quels points faut-il vérifier sur une mâchoire ?

Le support (jante) de la mâchoire de frein ne doit pas être concave.

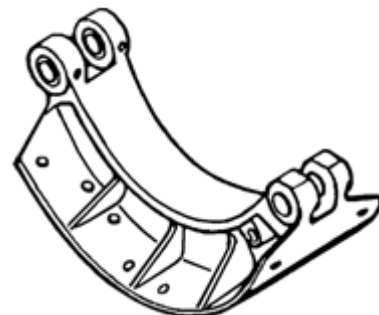

Aucun défaut d'assemblage ne doit être constaté.

L'ensemble de la mâchoire de frein ne doit pas être déformé.

Les alésages et les trous de perçage des rivets ne doit pas être ni ovalisé, ni déformé.

Les mâchoires de frein doivent être bien nettoyées.

Il est possible de traiter la surface d'appui avec un produit anticorrosion.

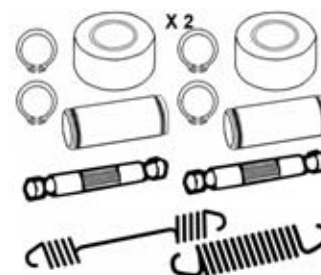

Pourquoi changer les ressorts et autres accessoires ?

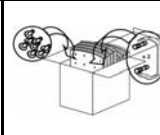

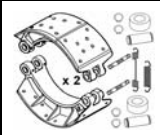

Les ressorts de rappel de mâchoires permettent un retour efficace et rapide après action, pour un meilleur refroidissement et moindre d'usure.

Les galets doivent être libre en rotation, sans exempt de déformation.

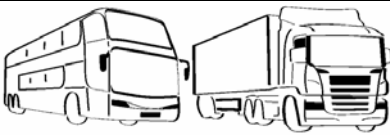

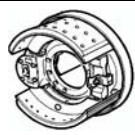

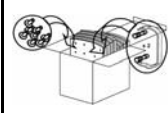

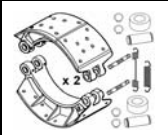

En cas de doute sur une pièce, changez là.

MINIKIT FRICTION

Les autres pièces du frein

Vous pouvez obtenir auprès de votre distributeur les pièces détachées composantes pour votre frein.

Il est important pour garder votre matériel en fonction de vérifier à chaque changement de garnitures les autres pièces composantes du frein.
